Burp Suite Instalation and Configuration Setup

Burp Suite is a comprehensive web application security testing platform developed by Portswigger, used by security professionals to find vulnerabilities by acting as a proxy to intercept, inspect, and modify traffic between a browser and a web server. It's an all-in-one toolkit with tools for automated scanning (Burp Scanner) and manual testing (Proxy, Repeater, Intruder), available in Community (free), Professional, and Enterprise editions, with the Pro version being a industry standard for penetration testers and bug bounty hunters.

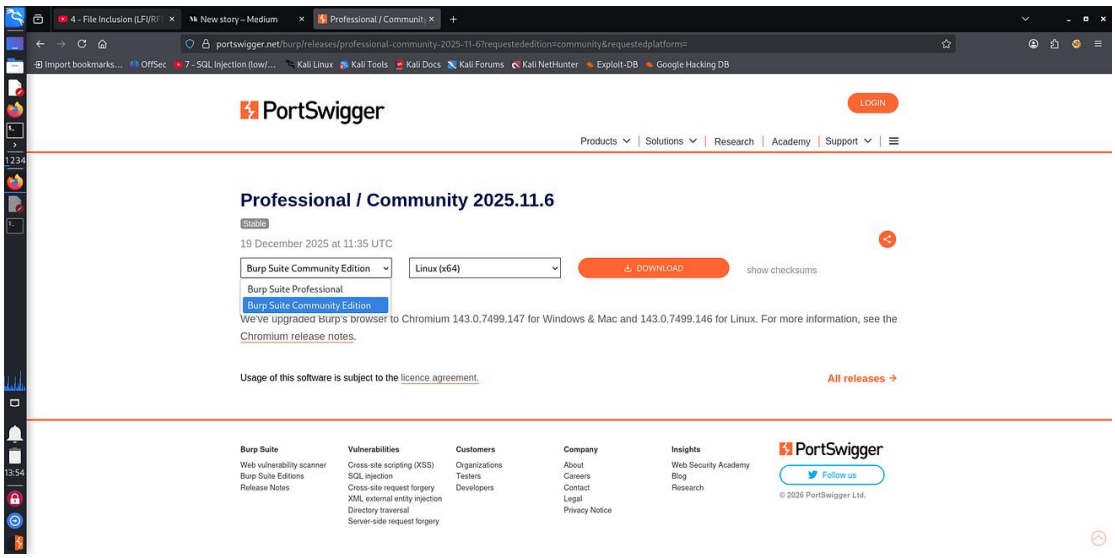
Step 1: Installing Burp Suite

- Go to your VBox and open Kali Linux.

- Go to Burp Suite's installation site:

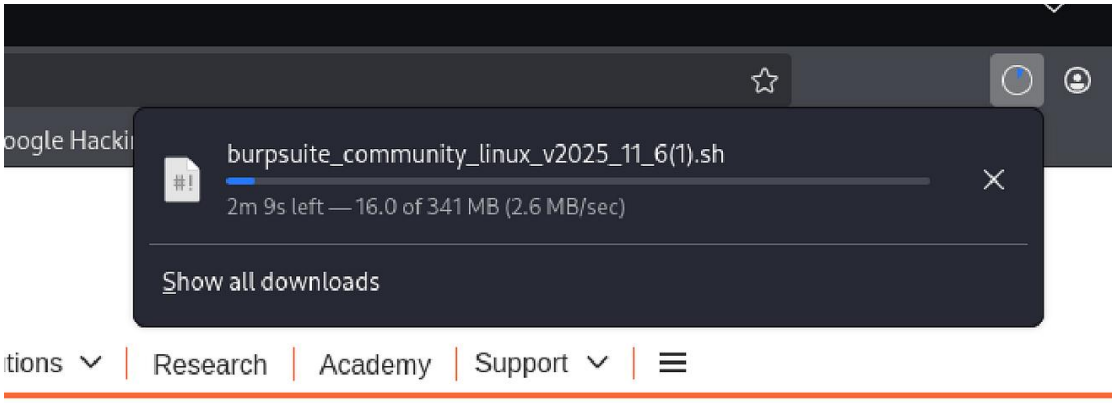
Professional / Community 2025.11.6

We've upgraded Burp's browser to Chromium 143.0.7499.147 for Windows & Mac and 143.0.7499.146 for Linux. For more…
portswigger.net



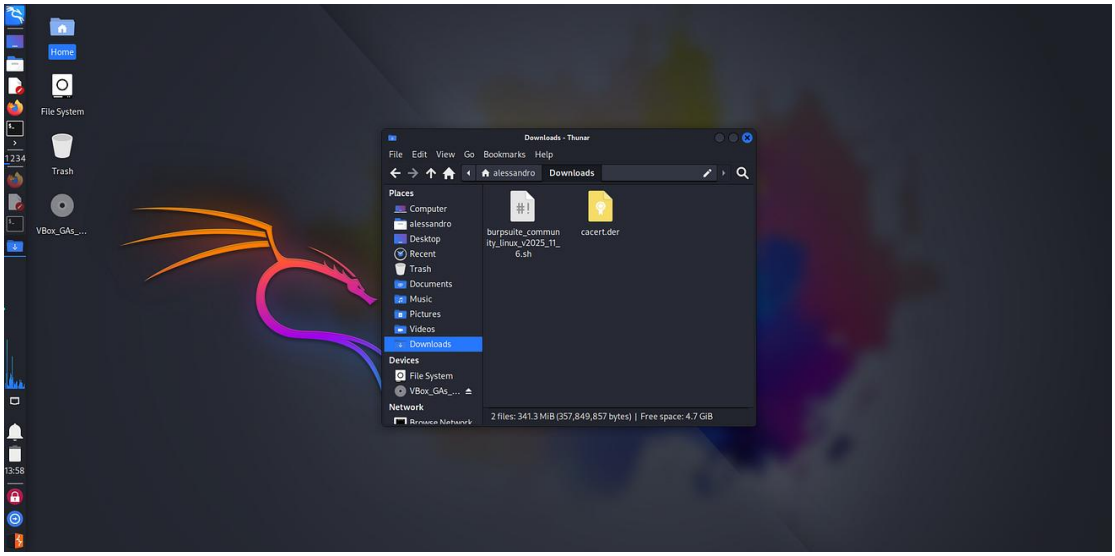
- Choose the Community Edition (Free) and choose the Linux(64x) and "Download".

- On your top right corner, a download popup

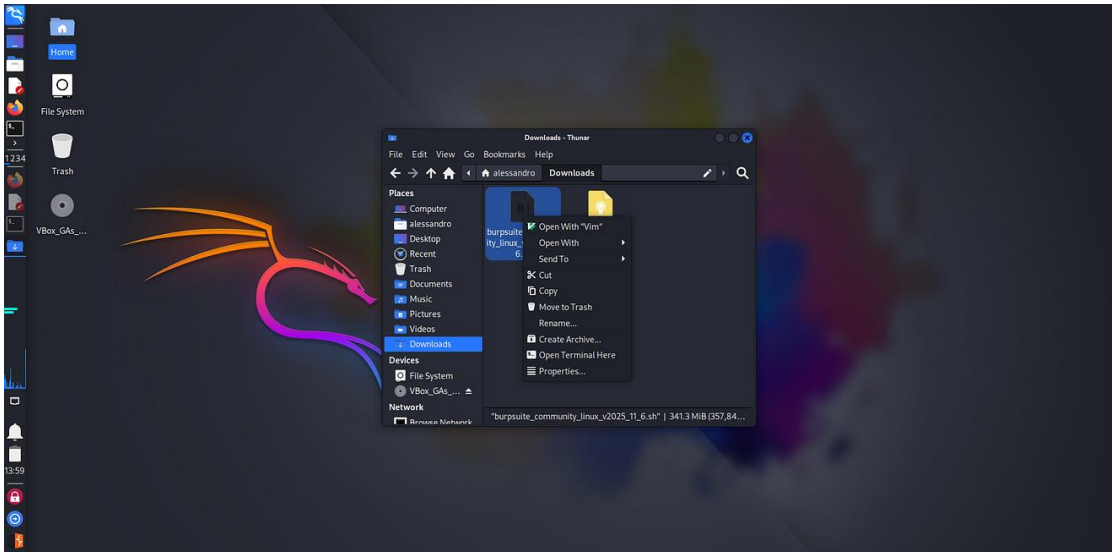


- Wait till it's finished, and then head to your home screen

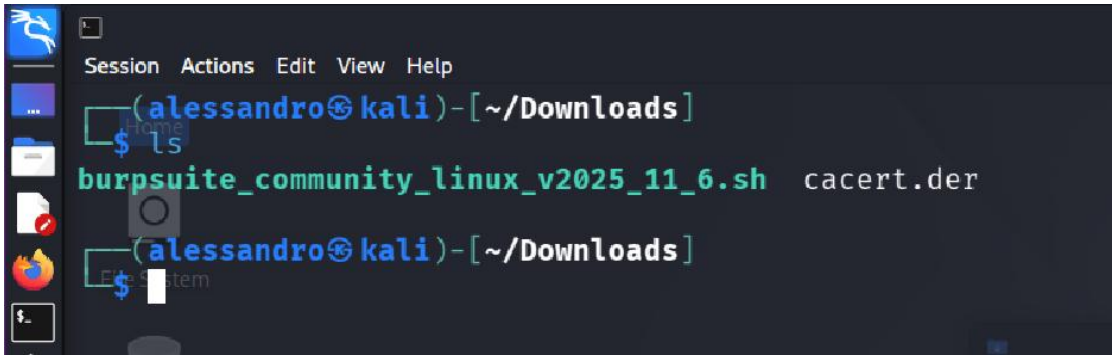
- Go to "Home" icon and click "Downloads"



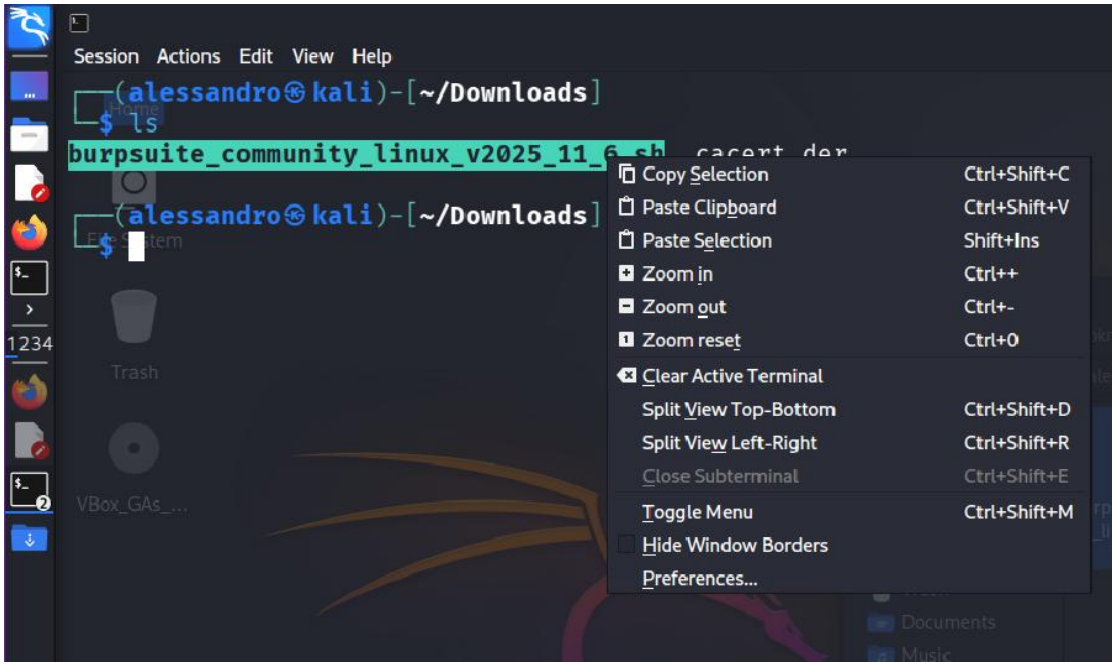
- We can see the downloaded burp suite file is there.



- Right click the file and choose “open terminal here”.
- It’ll popup a terminal, then type “ls”



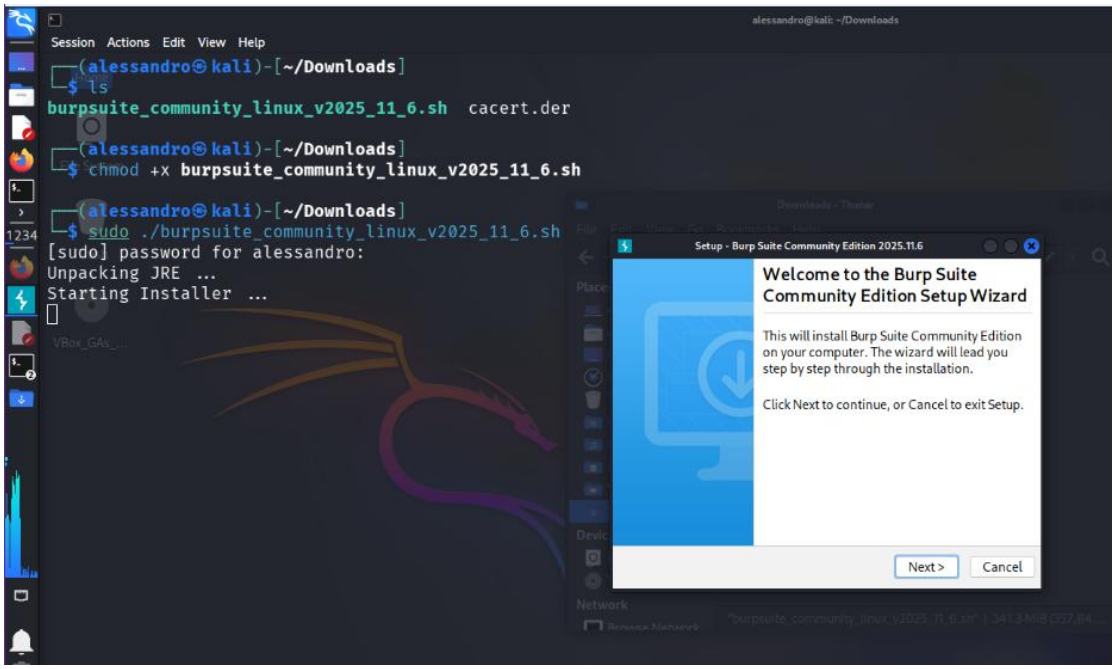
- Block the burpsuite file name and then choose “copy selection”



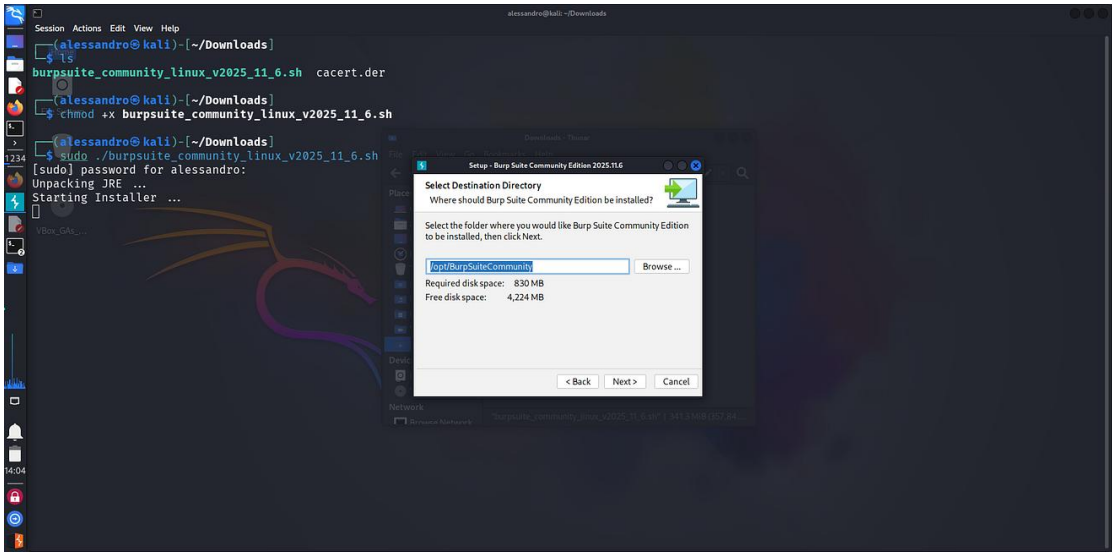
- Then type “chmod +x <filename>”

- Then type “sudo ./ <filename>”

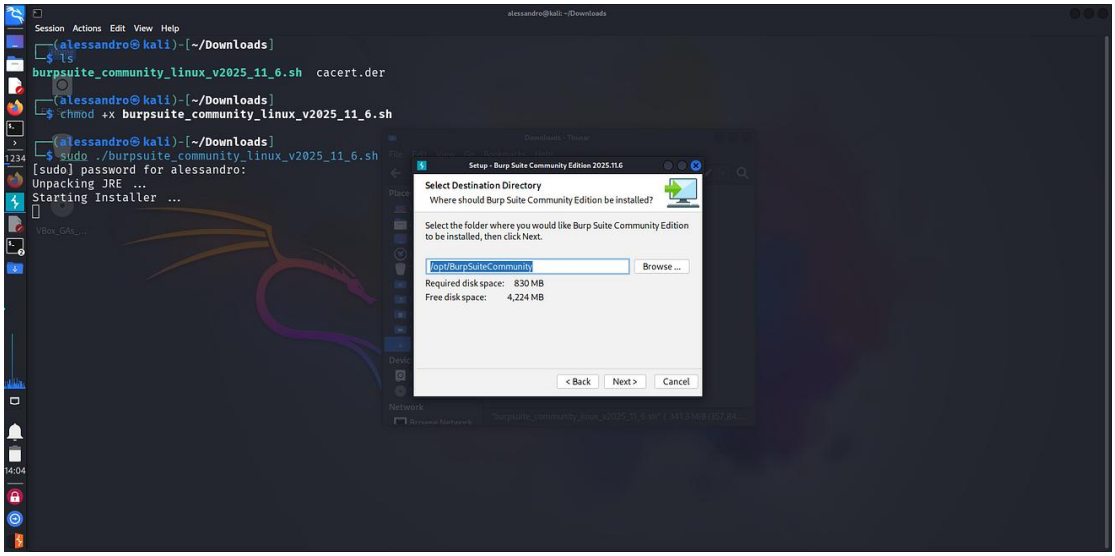
- After that, enter your password, and it'll process while a popup shows up.



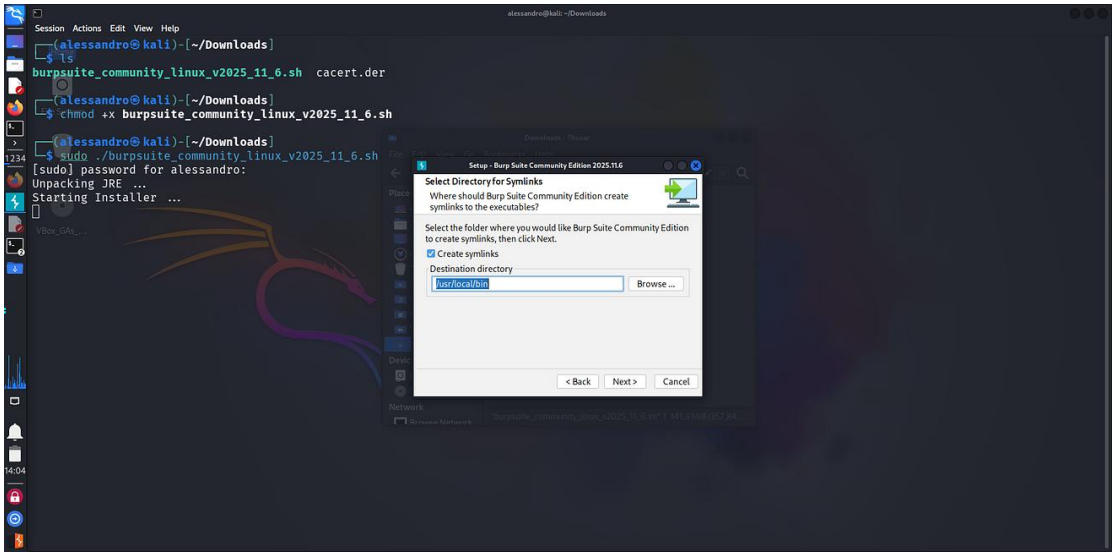
- Click "Next".



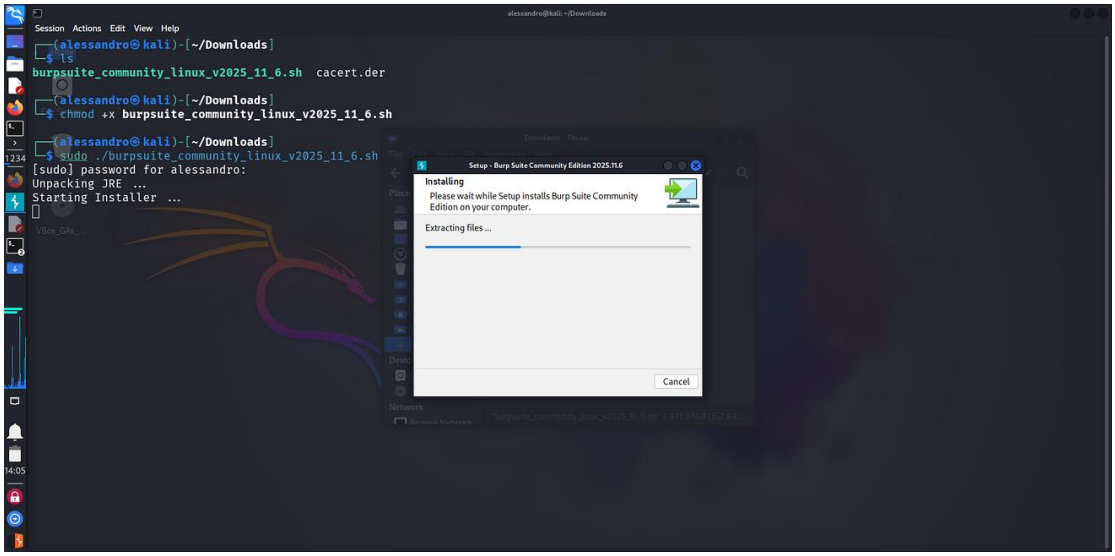
- Click “Next”.



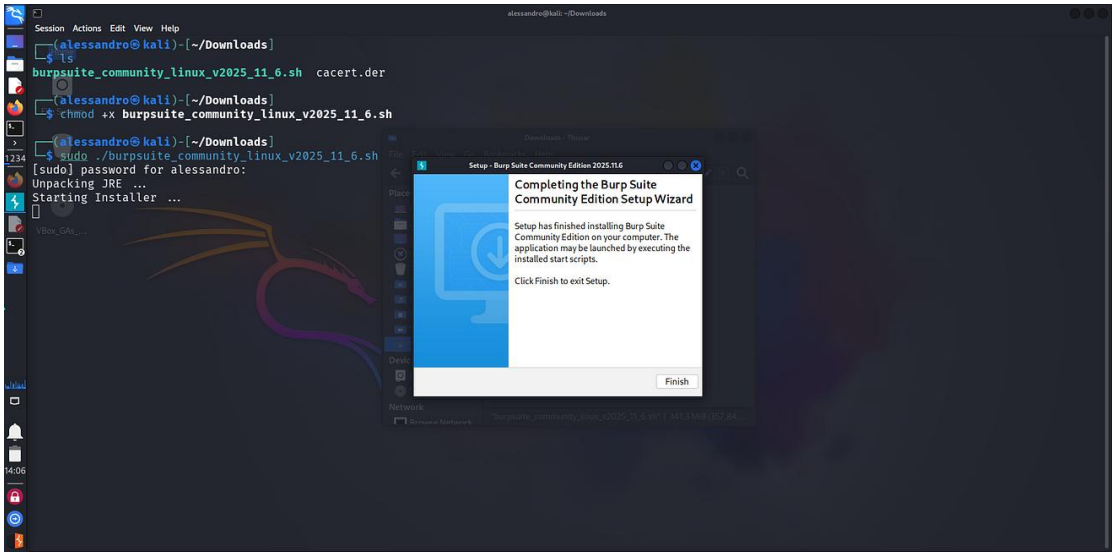
- Click “Next”.



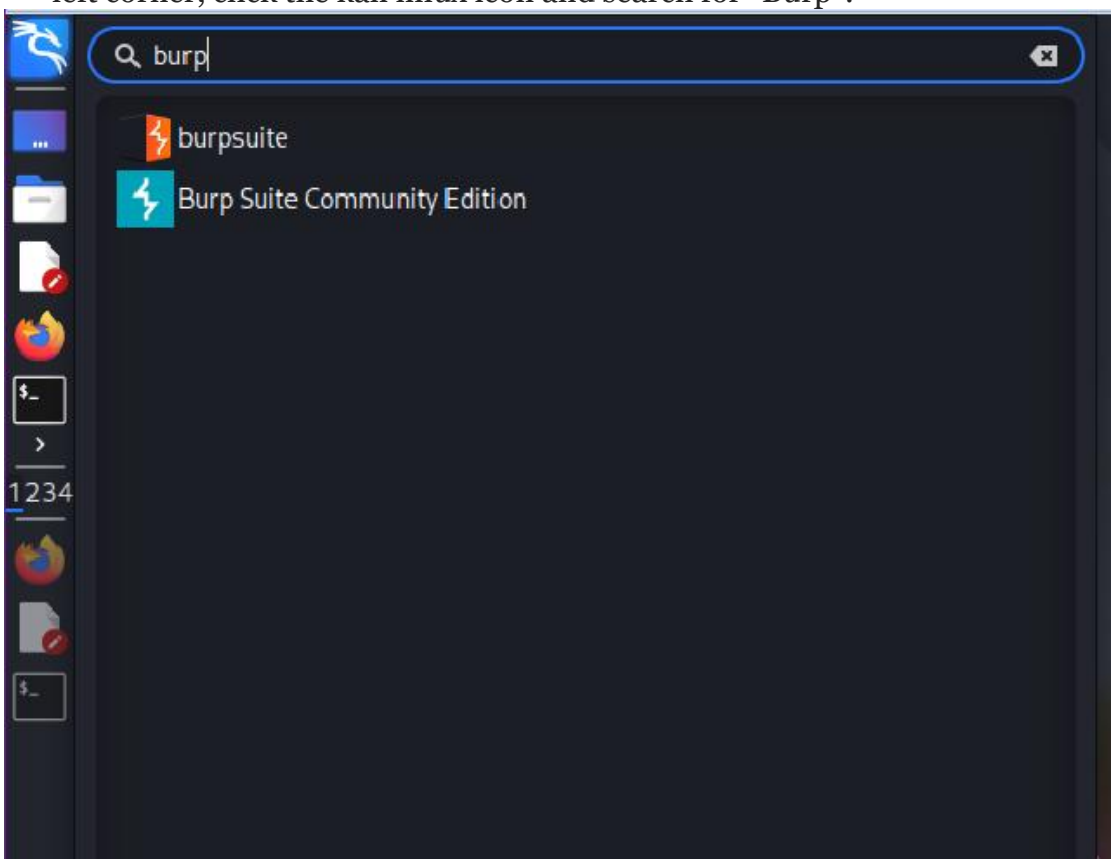
- Click “Next”, then wait.



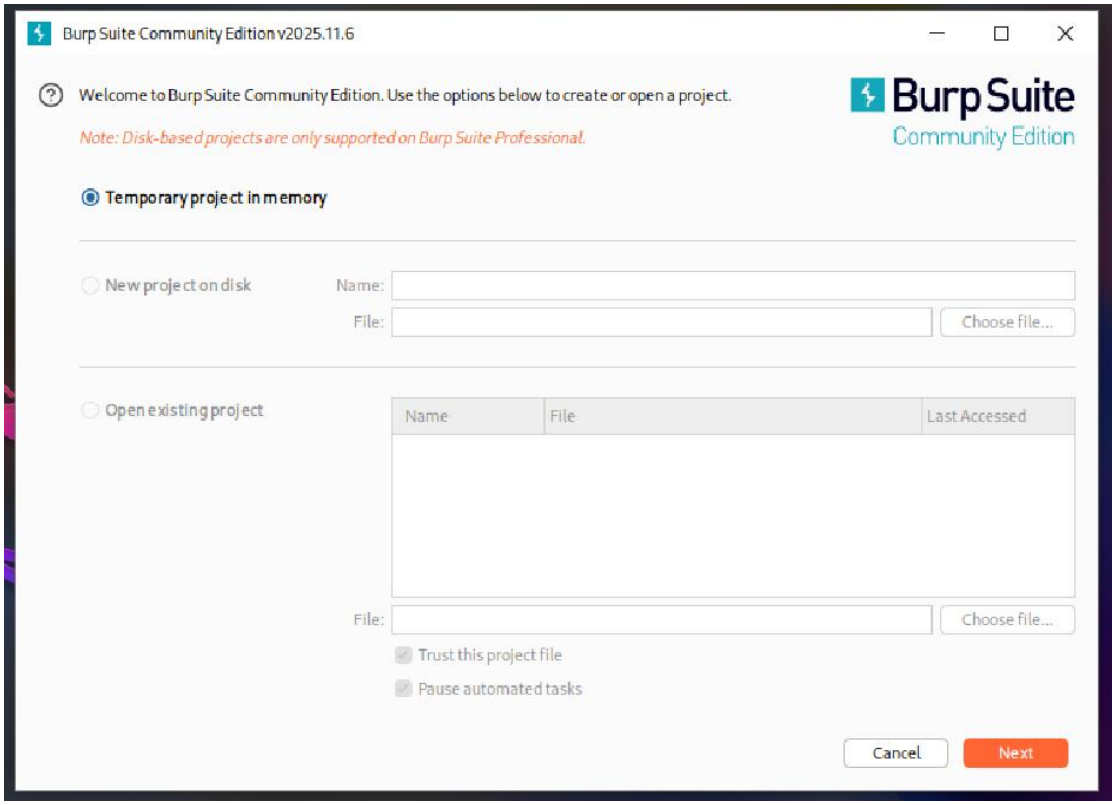
- After it’s finished, it would look like this, then click “Finish”.



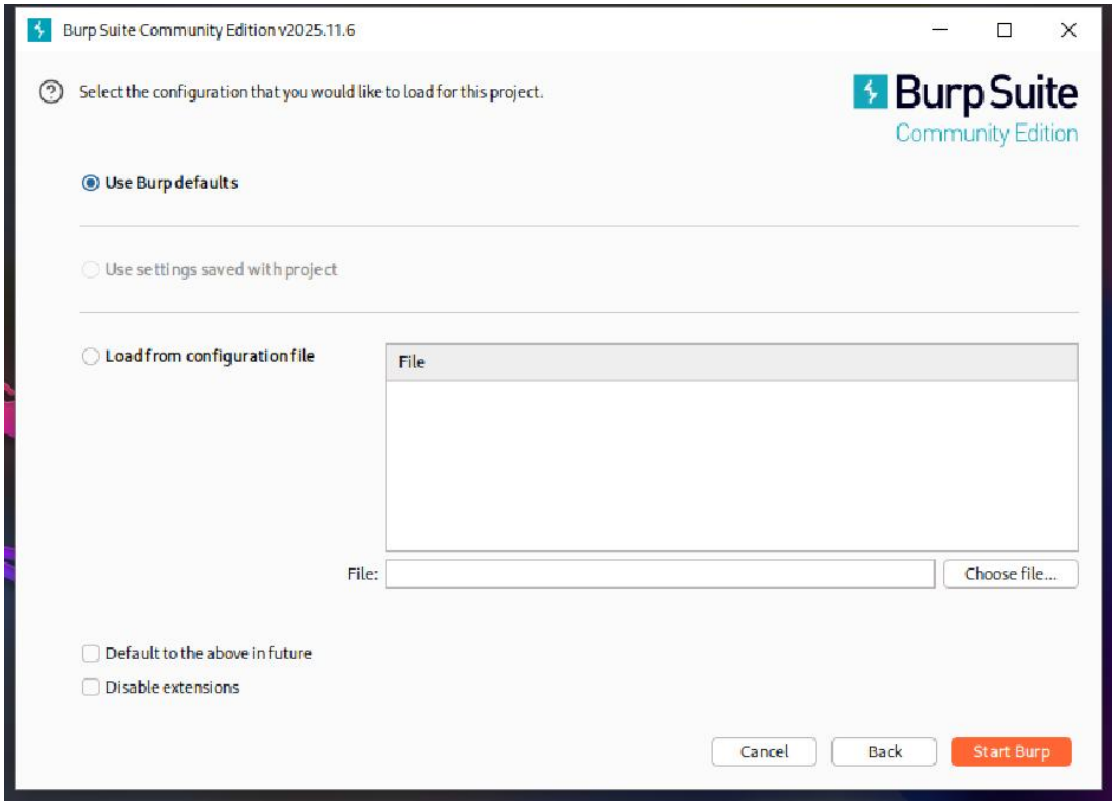
- Close your terminal and once again head to Home Screen, and on your top left corner, click the kali linux icon and search for “Burp”.



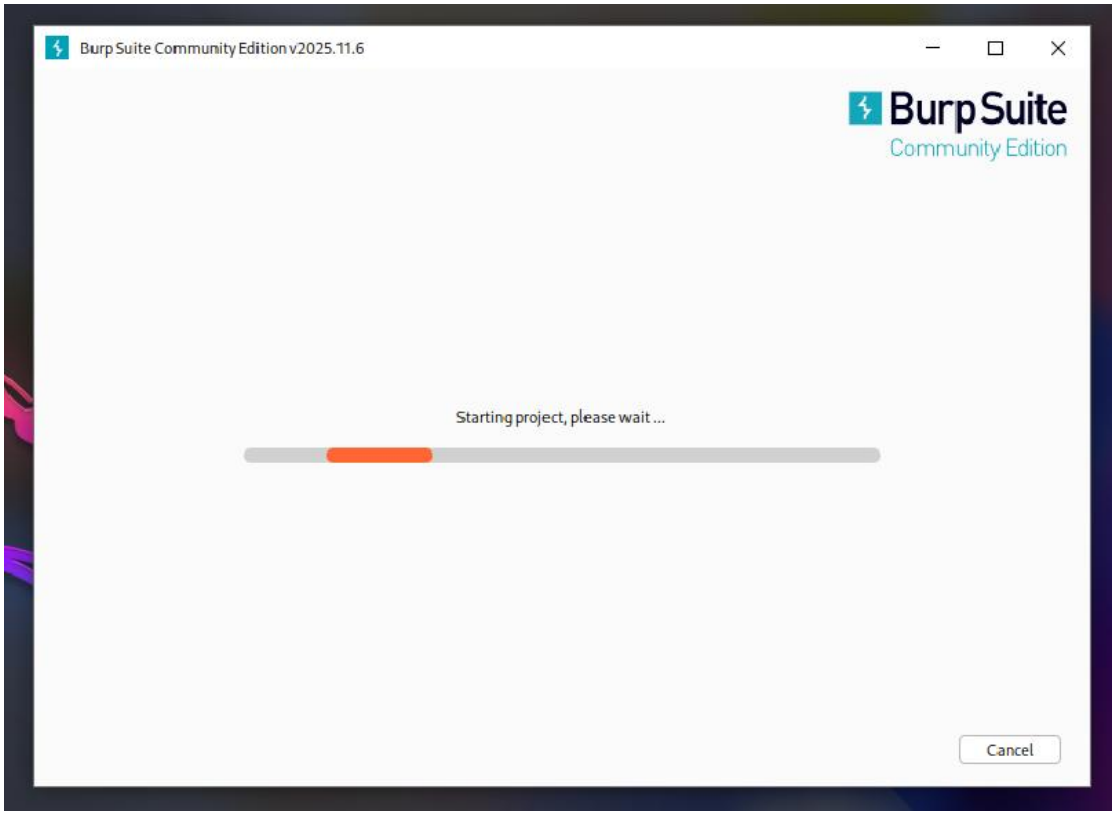
- Choose and click the “Burp Suite Community Edition”.



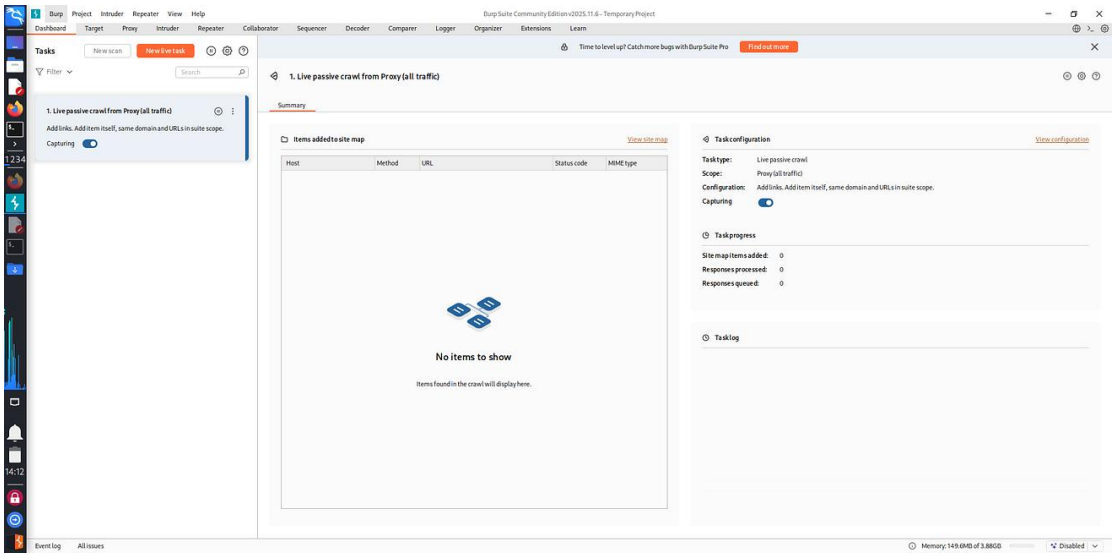
- A Burp Suite window would pop up and just click “Next”



- Click “Start Burp” and it’ll load like this.



- Once finished, it’ll look like this

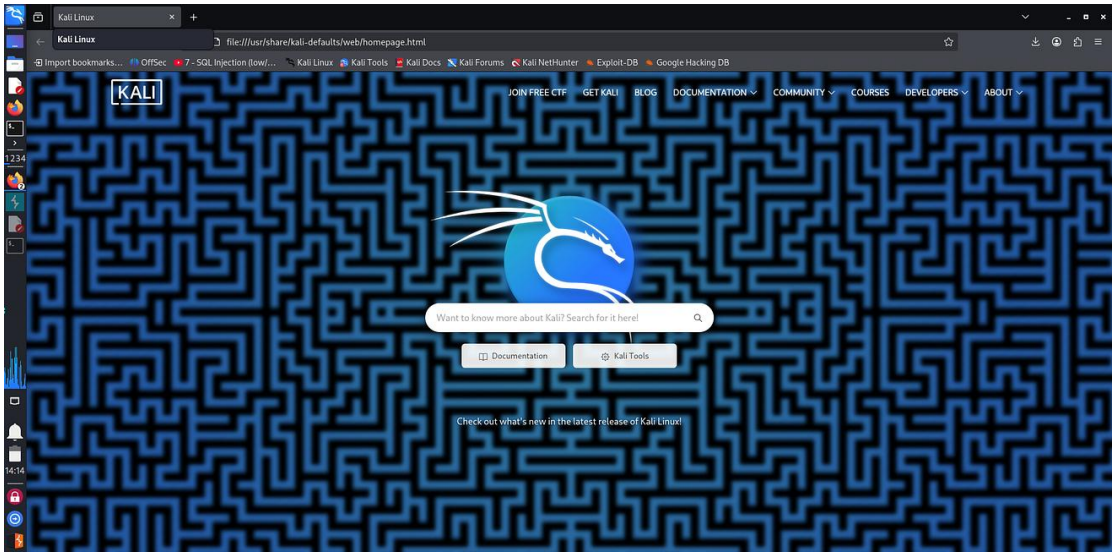


At this point, you’ve successfully download Burp Suite

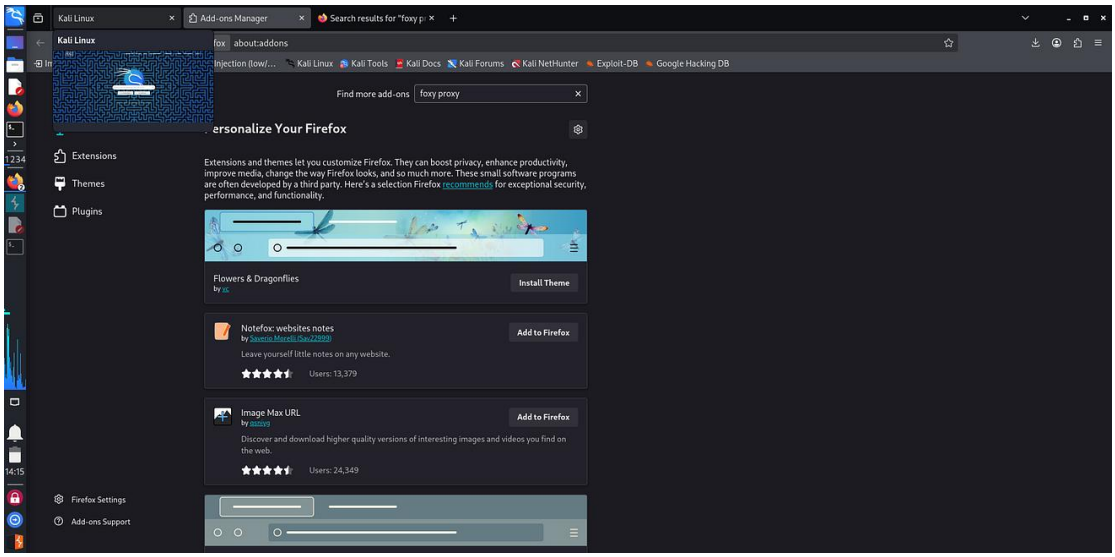
Now we just have to configure the settings so that it could function properly as an web vulnerability scanner.

Step 2: Configure the proxy

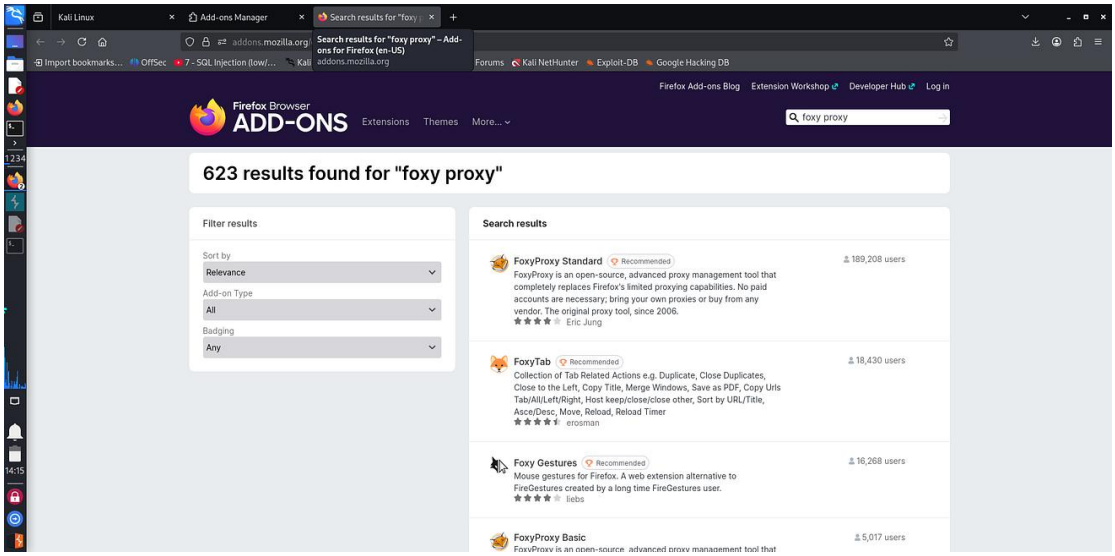
- Open your browser (Firefox recommended)



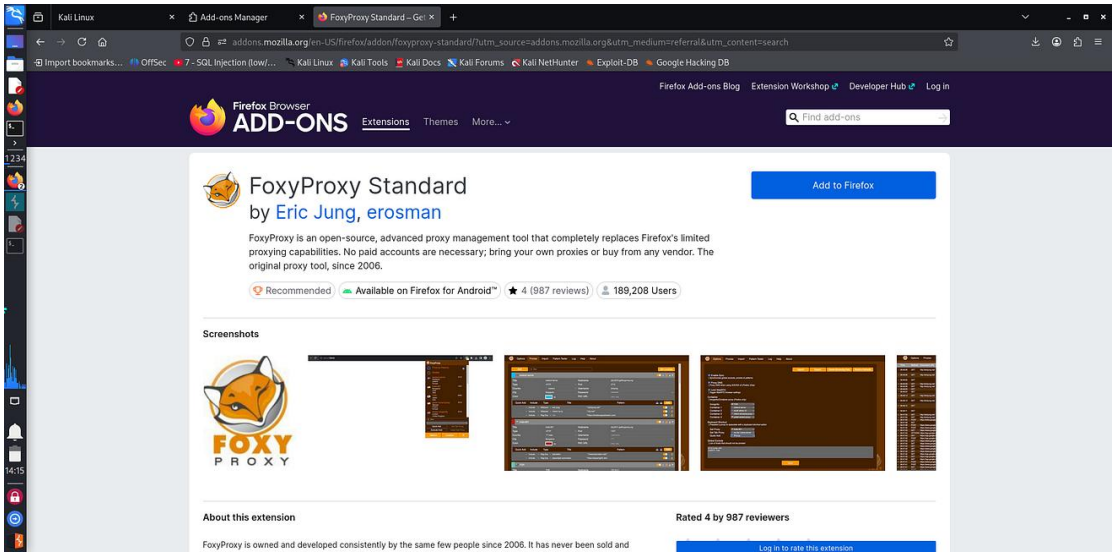
- Then click on the “Extensions” button on the top right corner (second from the left [puzzle alike button]).



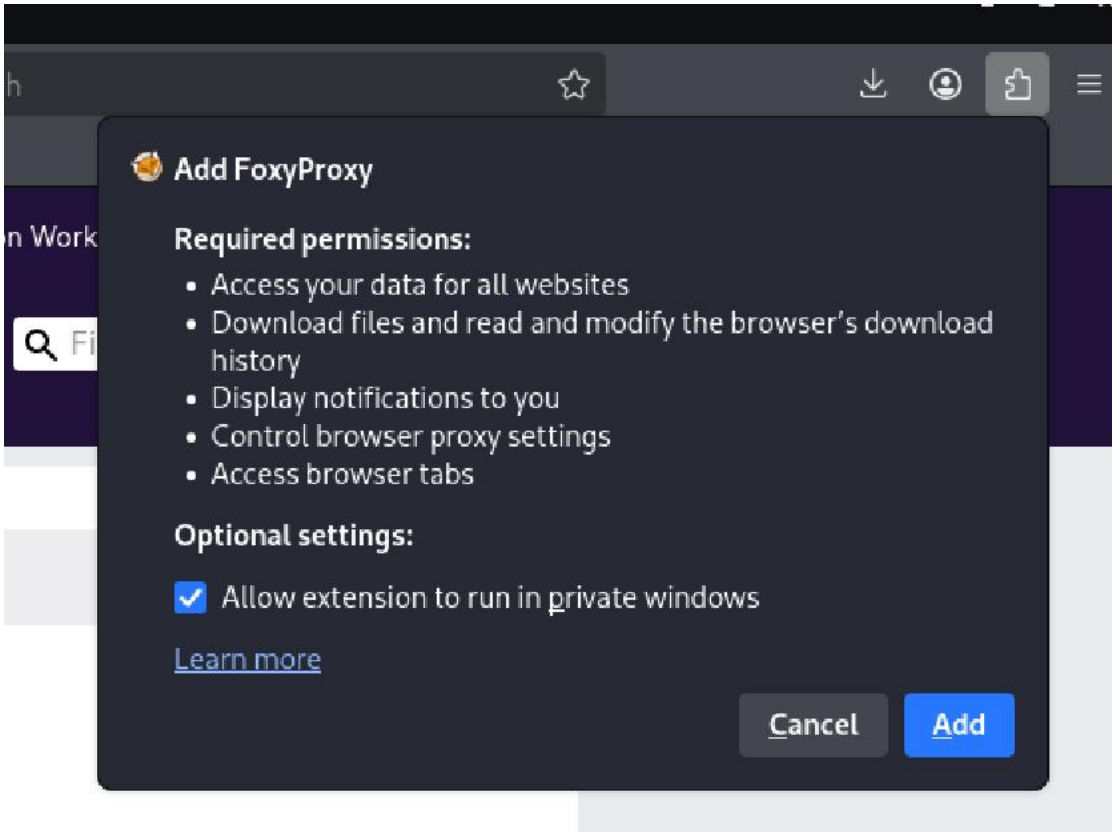
- On the search bar, type “Foxy Proxy” and enter.



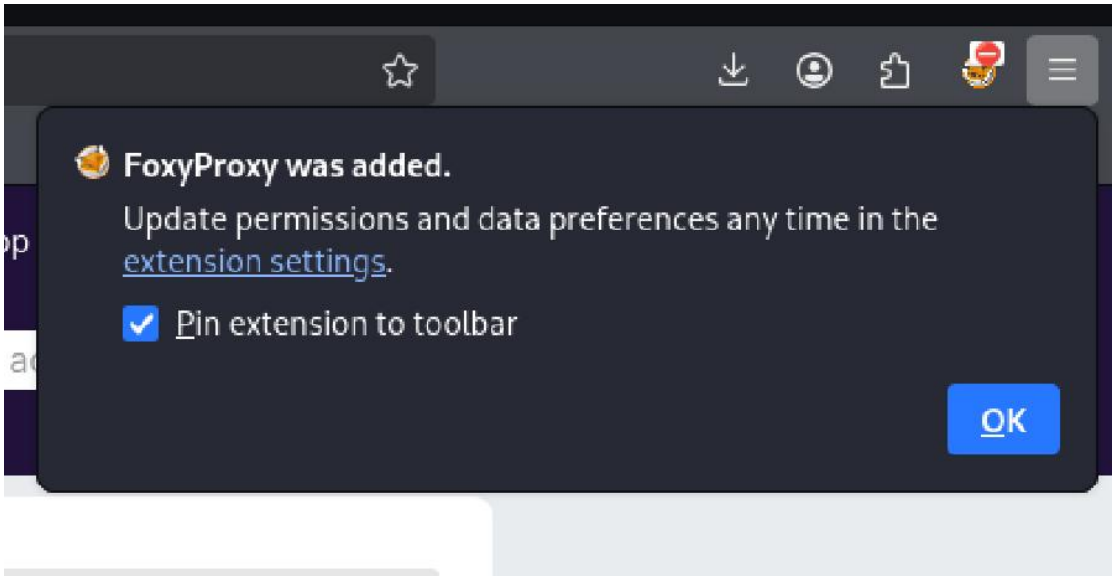
- Click on the “FoxyProxy Standard”.



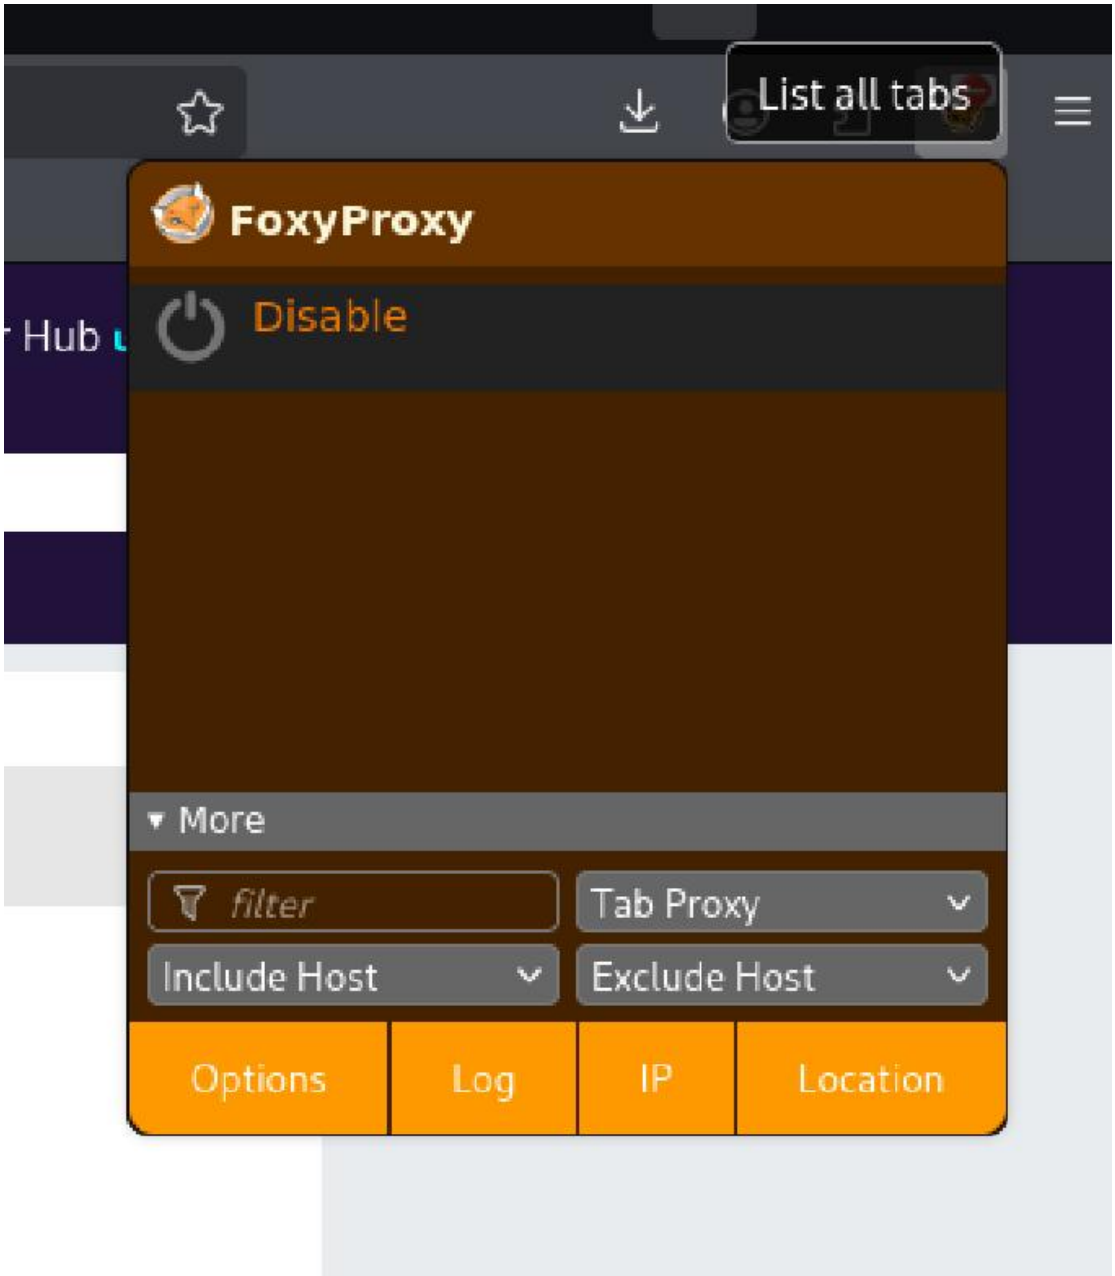
- Click “Add to Firefox”.



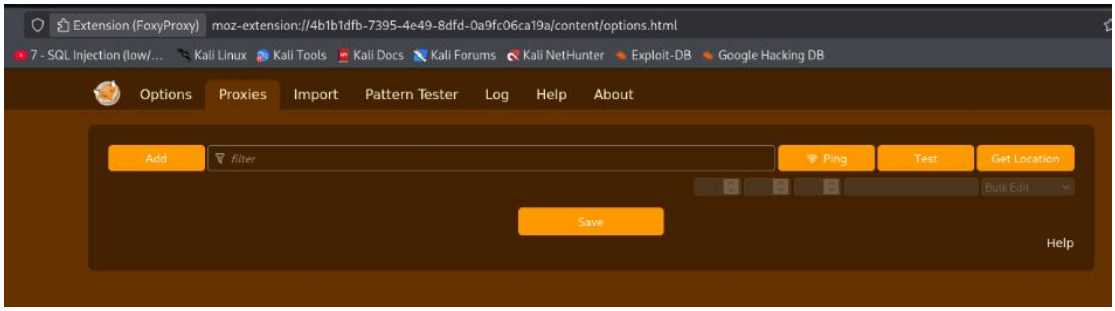
- On the top right corner, you'll see a pop up like this, check the Optional Settings and click "Add". And it would look like this.



- The extension's would look like this.



- After that, you can configure it by clicking on the “Options” button, and head over to “Proxies” section.

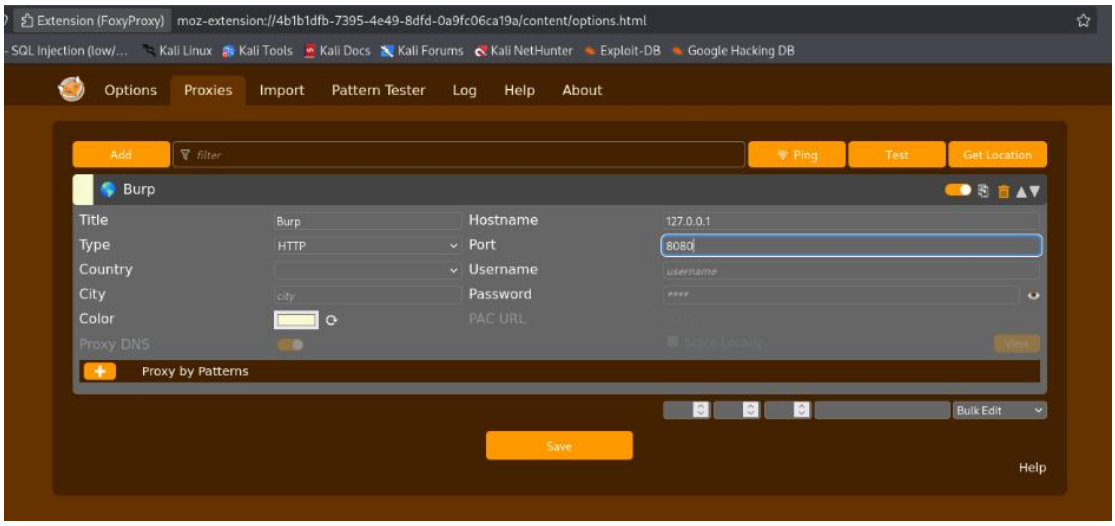


- Press add and fill up the sections like below:

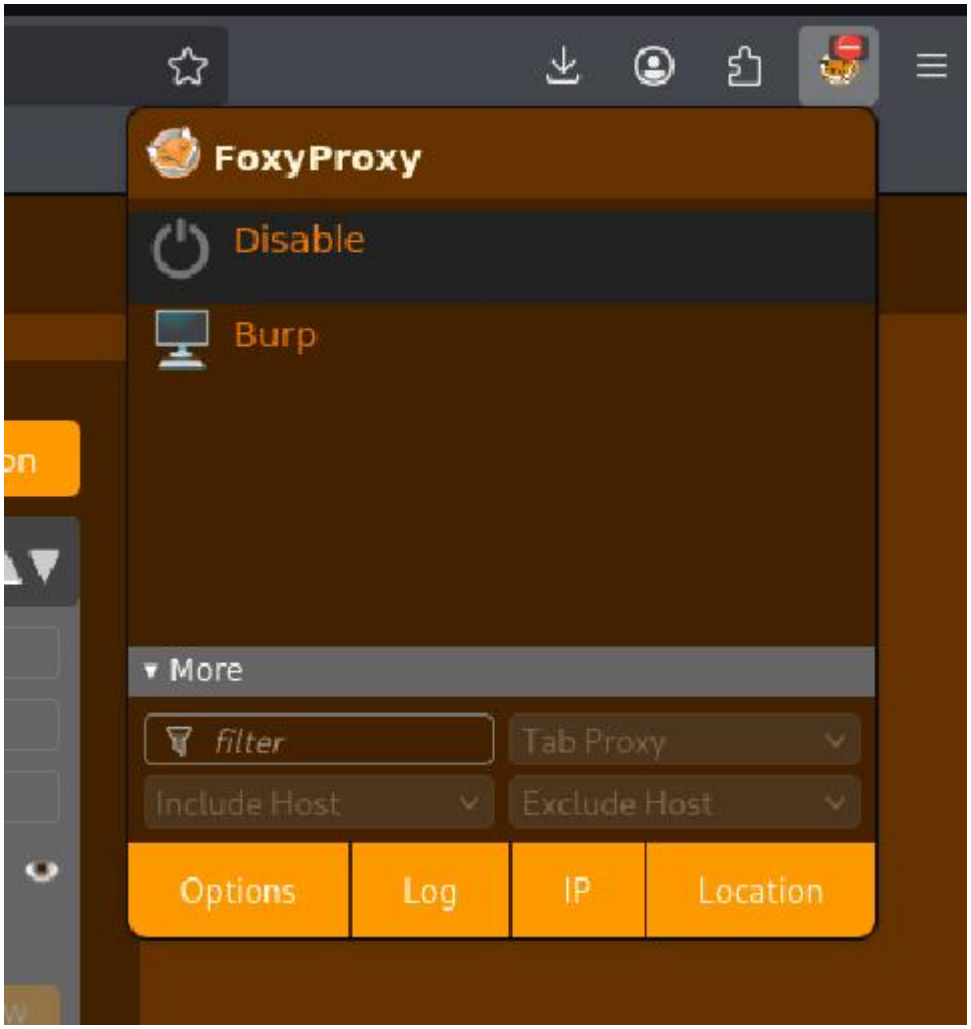
  Title = Burp

  Hostname = 127.0.0.1

  Port = 8080



- Then click “Save”. Your extensions would look like this.



At this point, Step 2 is complete, but you still can't use Burp Suite to intercept HTTPS traffic, you need to add Burp Suite's CA certificate to your browser and system.

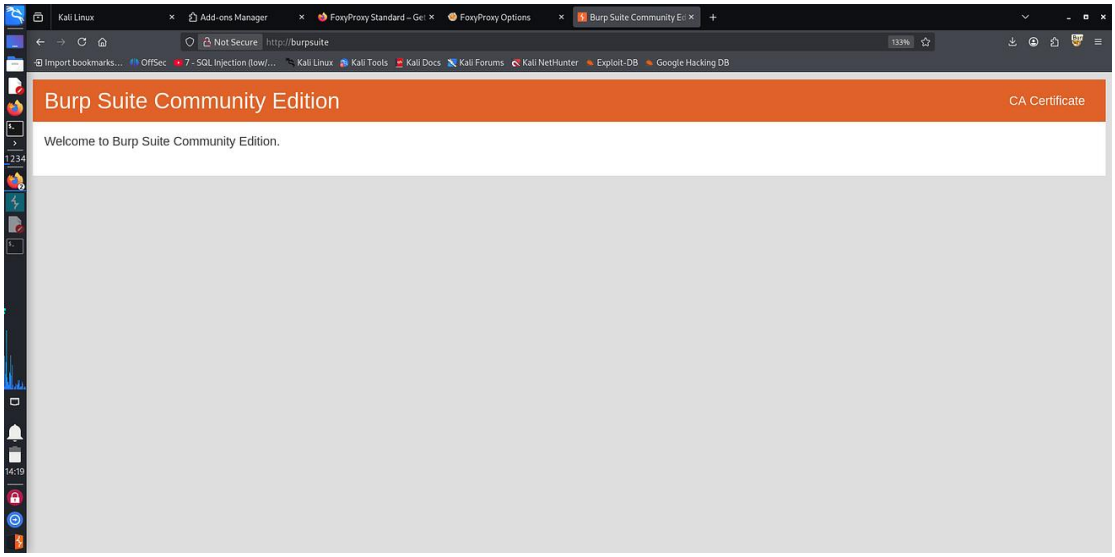
> *Without trusting Burp's Certificate Authority (CA), your browser throws security errors and blocks the connection because it doesn't recognize Burp's dynamically generated SSL/TLS certificates for secure sites.*

Step 3: Adding certificate

Installing the certificate makes your browser trust Burp as a legitimate authority, allowing it to decrypt, inspect, and re-encrypt traffic seamlessly.

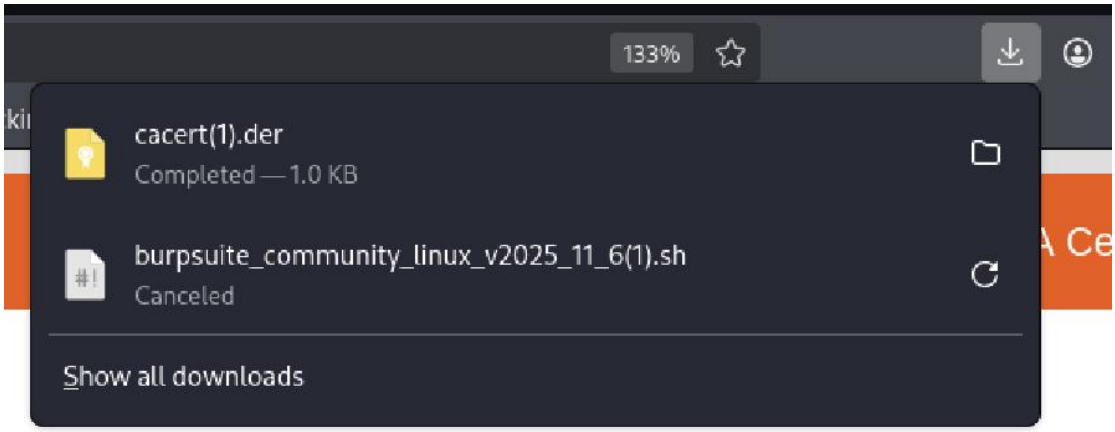
- Go to http://burpsuite/

Press enter or click to view image in full size

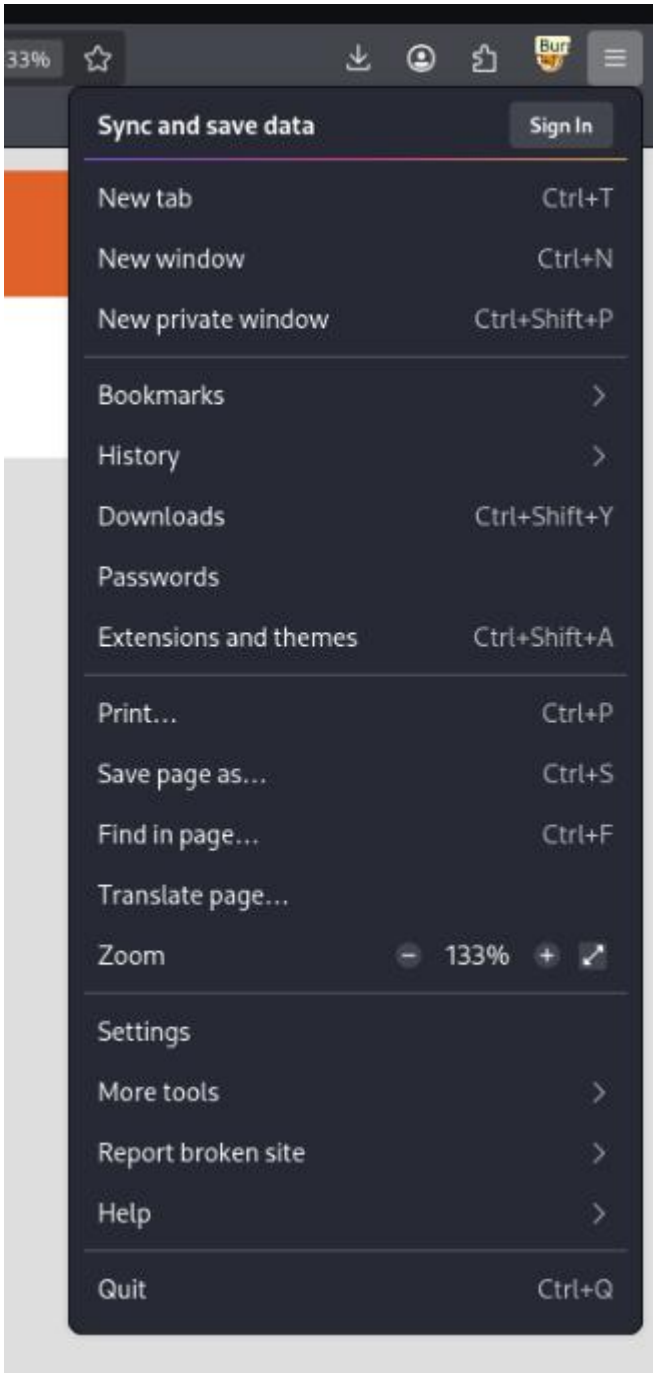


- Click the “CA Certificate” on the top right corner, and it’ll automatically download the file.

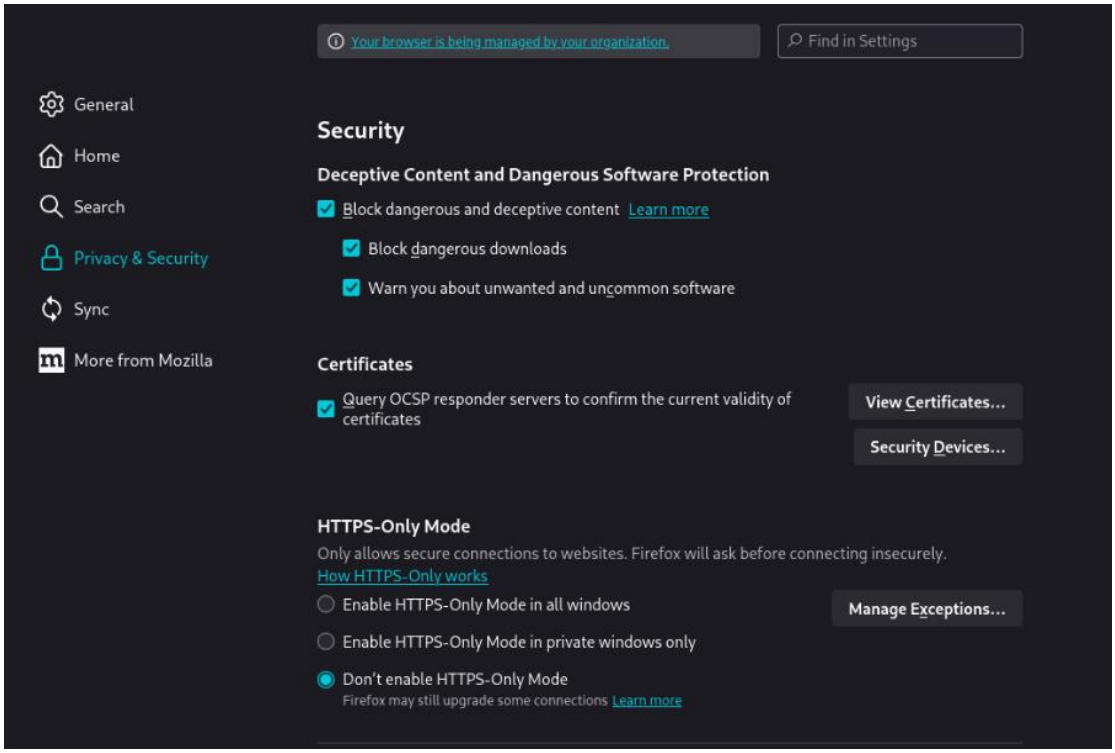
Press enter or click to view image in full size



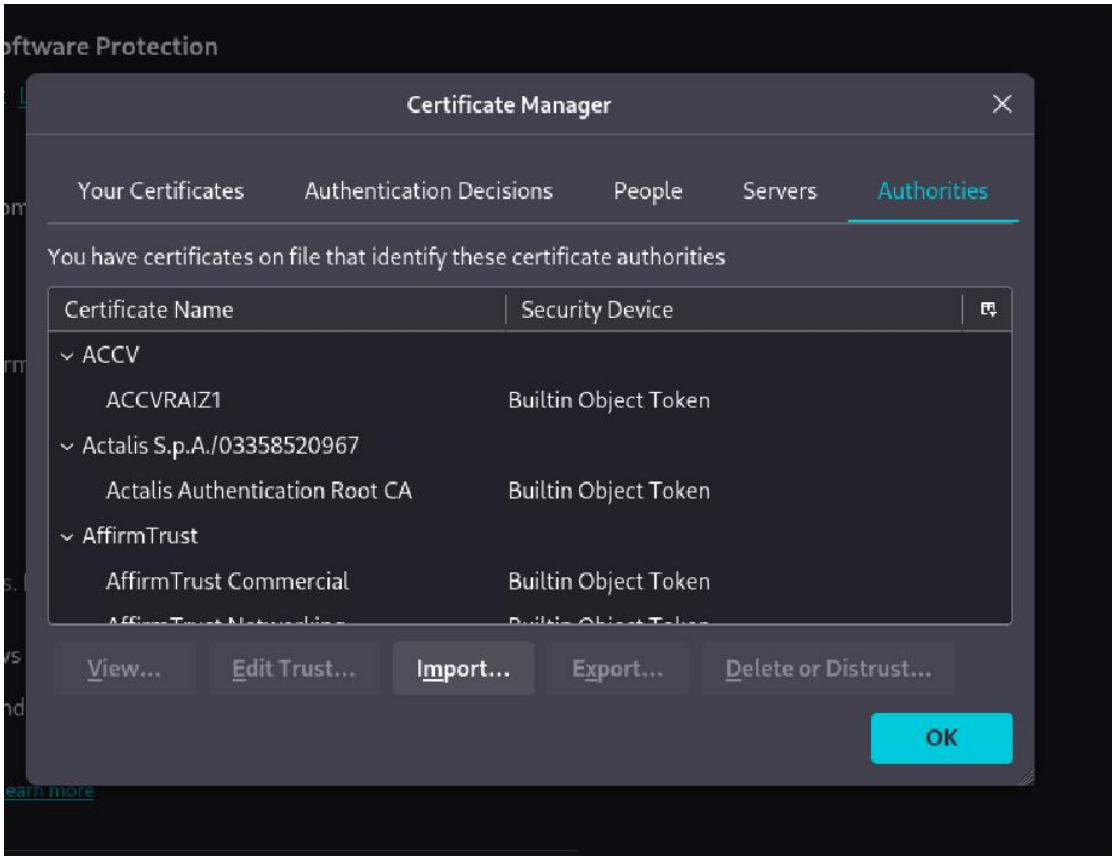
- Next, click the 3 horizontal lines menu then open “Settings”.



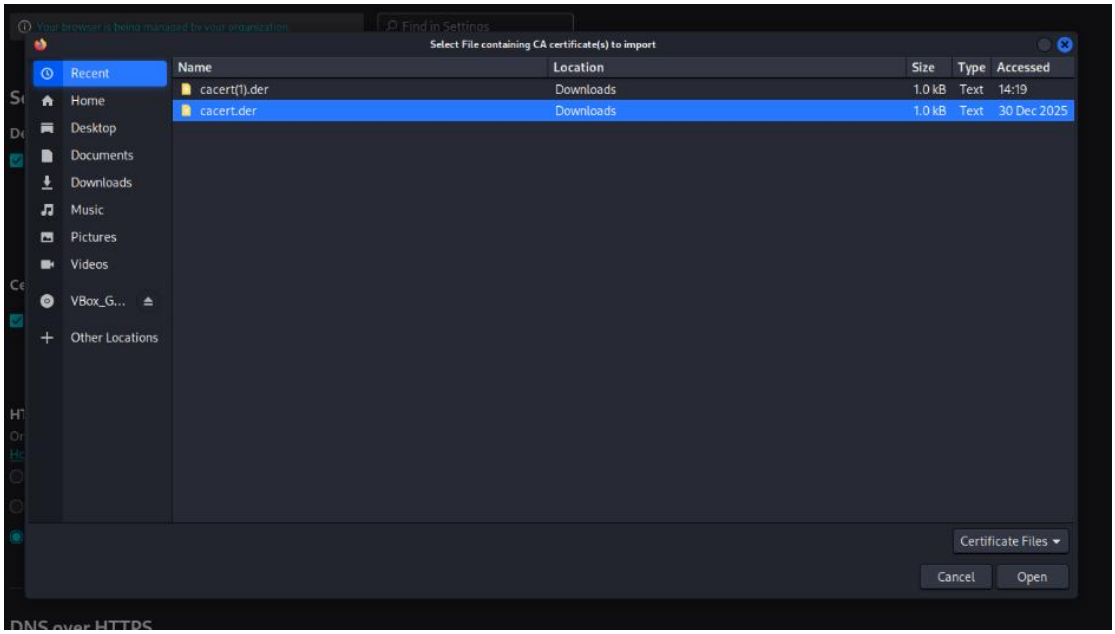
- Search for “Privacy & Security” section and look for “Certificates’, then click “View Certificates”.



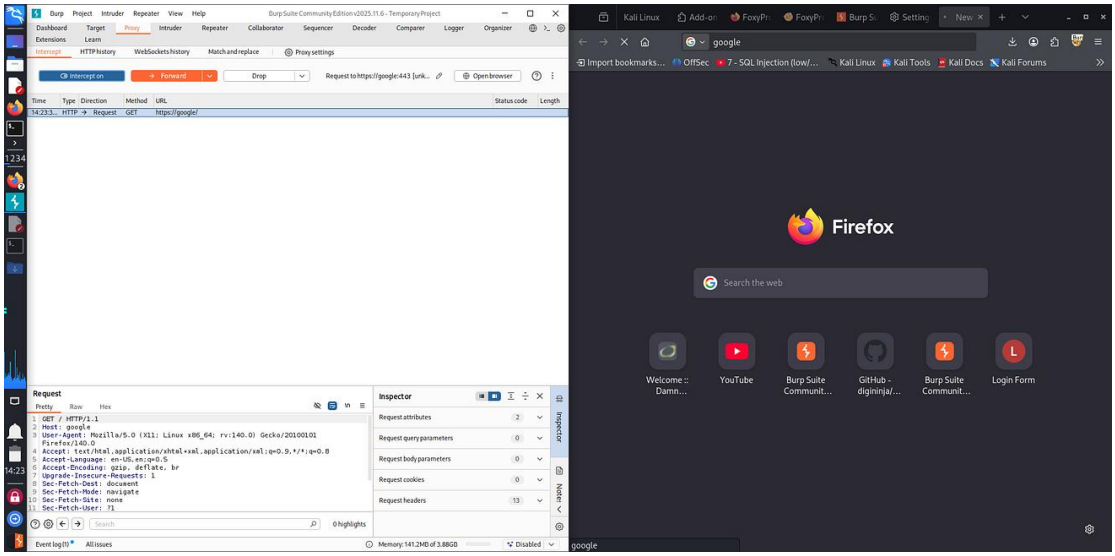
- Click on “Import”.



- Choose the downloaded file and click “Open”.



- Then the setup is done.

Step 4: Properly functional Burp Suite


- Open your Burp Suite and click on “Proxy Section”, enable the “Intercept” and try to open any website on your browser (Firefox), and see how Burp Suite works properly without any issues.
